10. _____

Risolvi ogni problema usando le leggi degli esponenti.

1) $3^2 \times 3^{-4} = 3^{2-4} = \text{Array}$

2) $3^0 = 1 = \text{Array}$

3) $2^4 \times 2^{-2} = 2^{4-2} = \text{Array}$

4) $(\frac{1}{3})^4 = \frac{1}{3^4} = \text{Array}$

5) $(2^2)^4 = 2^{2 \times 4} = \text{Array}$

6) $2^1 = 2 = \text{Array}$

7) $2^0 = 1 = \text{Array}$

8) $2^{-3} \times 2^2 = 2^{-3+2} = \text{Array}$

9) $(2 \times 3)^3 = 2^3 \times 3^3 = \text{Array}$

10) $3^{-3} \times 3^2 = 3^{-3+2} = \text{Array}$
